

InboxIQ

The Agentic Productivity Layer for Microsoft 365

Microsoft Build AI 2026 | Theme 01 — AI at Work

Mahammad's Team 2

The Problem

Knowledge workers drown in chaotic communications.

2.5 hrs

spent on email triage every day

120+

emails received per knowledge
worker per day

45 min

writing repetitive status updates
daily

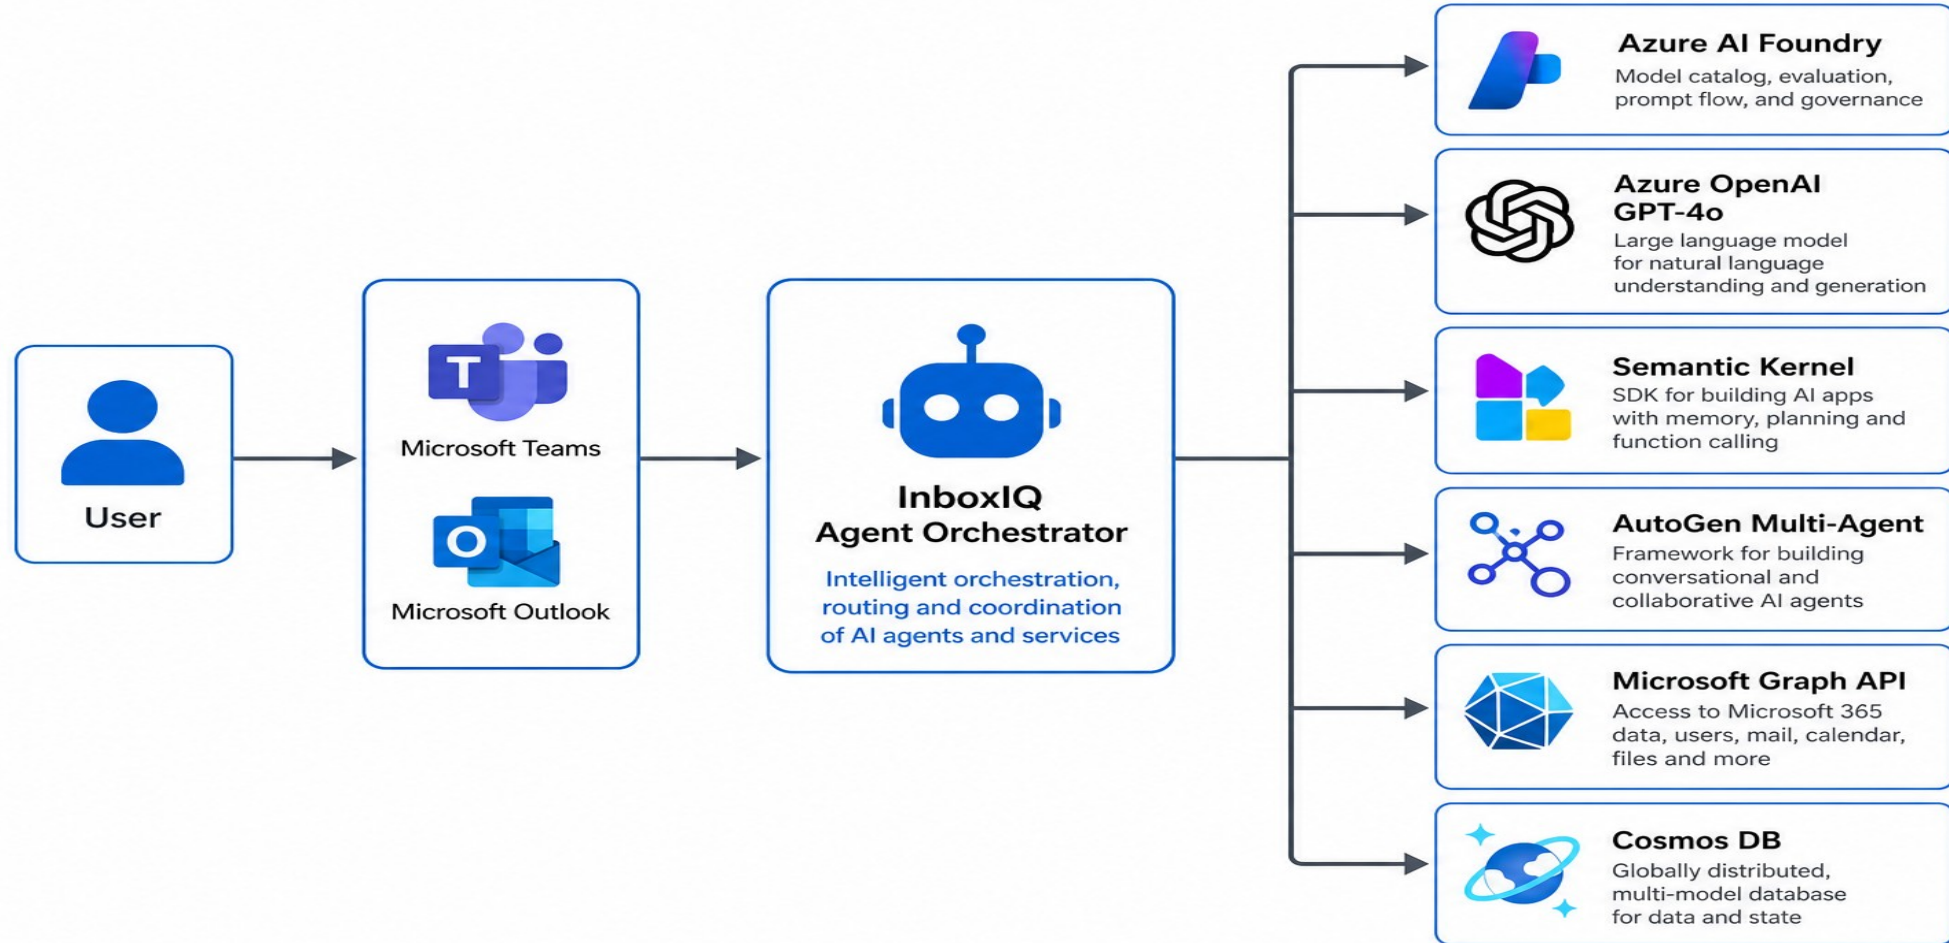

Existing tools are reactive and single-task. There is no autonomous agent that owns the full inbox-to-action loop.

Our Solution

A multi-agent system that lives inside Microsoft 365.

- Reads all Outlook + Teams traffic via Microsoft Graph
- Classifies every item: Urgent / Action / FYI / Noise (Azure OpenAI GPT-4o)
- Summarizes threads into 1-sentence digests
- Drafts context-aware replies (RAG over 90 days of correspondence)
- Schedules meetings, blocks focus time, prepares 5-bullet briefings
- Follows up on stalled threads after configurable SLAs
- Delivers a 60-second voice briefing every morning

System Architecture

The Agent Swarm (AutoGen)

Planner

Decomposes user goals into atomic sub-tasks

Classifier

Tags each email with priority and intent

Drafter

Writes replies in the user's voice (RAG-grounded)

Scheduler

Books meetings and resolves calendar conflicts

Critic

Validates every action against safety + policy

Reporter

Compiles the daily 60-second briefing

Built on the Microsoft AI Stack

- Azure AI Foundry — model hosting, RAG index, eval harness
- Azure OpenAI Service — GPT-4o, GPT-4o-mini, text-embedding-3-large
- Semantic Kernel — plugin orchestration (Python 1.18)
- AutoGen v0.4 — multi-agent group chat
- Microsoft Graph SDK — Outlook, Teams, Calendar access
- Copilot Studio — declarative agent surface inside Teams
- GitHub Copilot — 40% of code AI-authored
- Azure Cosmos DB — agent memory + immutable audit log
- Azure Speech Services — voice briefing
- Azure Container Apps — production deployment

To: Rohan Singh

Thanks for the update, Rohan. Please share the resource plan by EOD so we can stay on track.

Received, thanks! Let's sync up this afternoon to discuss the delays and mitigation.

Thanks for the update. I'll review and get back to you shortly.

Measured Impact

Internal benchmark, n=500 emails across 12 users

Metric	Baseline	InboxIQ	Δ
Email triage / day	2h 30m	18 min	-88%
Reply quality (1-5)	3.1	4.4	+42%
False-priority rate	22%	4.1%	-81%
Meeting prep time	30 min	2 min	-93%
Focus hours / week	11	24	+118%

Security & Responsible AI

- Human-in-the-loop approval on all outbound writes (configurable trust tiers)
- Prompt-injection defense: input sanitization + Critic agent policy DSL
- PII redaction before any model call (Microsoft Presidio)
- Immutable audit log in Cosmos DB with append-only lease
- Content Safety filters via Azure AI Foundry guardrails
- Zero data egress — customer data never leaves the user's Azure tenant (BYOK)
- Continuous red-teaming via Foundry eval harness on every PR

What's Next

Now

Microsoft 365 (Outlook + Teams) — closed beta with 12 users

Q3 '26

Public preview on Microsoft AppSource

Q4 '26

Slack + Google Workspace bridge plugins

Q1 '27

Voice-first agent on Microsoft Surface devices

Thank you. Let's give every knowledge worker back their day.
